

AI Workflow Audit

FlyRank AI Internship — Assignment 3

1. Recurring Workflow Audit

Task	Classification	Rationale
Completing FlyRank internship assignments	Collaborate with AI	AI helps me understand requirements, plan the work, and review my approach, while I make the final decisions.
Writing and debugging Python/ML code	Collaborate with AI	AI can suggest solutions and explain errors, but I need to test the code and understand the final solution.
Researching machine-learning concepts	Delegate to AI with review	AI can quickly explain concepts and provide starting points, but I verify important technical information.
Writing university assignments and reports	Delegate to AI with review	AI can help with structure and wording, but the final work must reflect my own understanding and requirements.
Understanding programming errors	Collaborate with AI	AI can explain the cause and possible fixes, while I test the solution and make sure I understand it.
Managing my FlyRank GitHub repository	Just me	I need direct control over files, commits, and submissions because repository mistakes can affect my internship work.
Making academic and career decisions	Just me	These decisions depend on my personal goals and priorities, so I should make the final decision myself.
Creating social-media content	Collaborate with AI	AI can generate ideas and drafts, while I decide what is appropriate for the audience and purpose.
Designing promotional graphics	Collaborate with AI	AI can support creative ideas, but I need to control the final design and ensure it meets the required visual standards.
Researching universities and professors	Delegate to AI with review	AI can speed up research and comparison, but I verify important information from reliable sources.
Preparing CVs and professional emails	Delegate to AI with review	AI can improve wording and structure, but I must ensure every claim accurately represents my experience.
Learning new AI/ML tools and workflows	Collaborate with AI	AI can explain tools and provide examples, while hands-on practice is needed for me to build real understanding.

2. Three Target Tasks for FL-02 to FL-04

Target Task 1 — FlyRank Assignment Research and Planning

What I will reuse: Use AI to understand assignment requirements, identify deliverables, and create a step-by-step plan before starting the work.

Done well means:

- I identify **100% of the required deliverables** before starting.
- I create a clear step-by-step plan.
- Important AI-generated information is verified.
- The final submission satisfies all stated assignment requirements.

Target Task 2 — Python/ML Debugging and Explanation

What I will reuse: Use AI to diagnose Python/ML errors and explain why a proposed solution works.

Done well means:

- The cause of the error is identified.
- The corrected code runs successfully.
- The expected output is produced.
- I can explain the reason for the fix rather than blindly copying it.

Target Task 3 — Professional Writing and Applications

What I will reuse: Use AI to improve CVs, professional emails, internship applications, and similar documents.

Done well means:

- The final document contains **zero invented or false information**.
- The document is grammatically correct and professional.
- It is customized to the specific opportunity.
- I personally verify and approve **100% of factual claims** before submission.
